Ex. No: 13 Implement your own ping Program

Aim:

To implement a simple ping program to check the connectivity b/w two network services.

Theory:

Ping as a network ability used to check whether a destination service is reachable through a network. It sends a request to the destination and waits for a reply. If reply is recived, connection is succesful.

Requirements:

Computer

Python / suitable programming environment.

Network connection

Procedure:

1. Create a new program for implementation.
2. Import the received socket network library.
3. Get IP address or hostname of the destination.
4. Create a socket for communication
5. Send req packet to the destination
6. Wait for response from destination

7. If a response is received display that destination is reachable.
8. Reach the projects for required and packets.
9. Display the result and close connection.

Algorithm:

1. Start
2. Enter destination IP address
3. Create a socket
4. Send a ping request
5. Wait for response
6. If response is received
7. Otherwise display that is unreachable.
8. Stop

Result:

Thus, the ping Program was successfully implemented.
