Ex.No: 06 Experiment on Packet capture tools Wire Shark

Aim: To do experiments on Packet Capture tool: WireShark

Packet Sniffer

- Sniffs messages being sent / Received from / by your computer.
- Store and display the contents of the various protocols fields in the messages.
- Passive Program
- Recieves a copy of all Packets (Sent / Received)

Packet Sniffer Structure Diagnostic Tools:

- TePdump
  - Eg tcpdump -enx host 10.129.41.2 -w sce3.out
- Wireshark
  - Wireshark - reuce 3 - out

Description:

Wireshark:

Wireshark, a network analysis tools formerly knowns Ethernal captures Packets in real time and display them in human - readable format.

What can we do

Capture network traffic

Decode Packet Protocols using directors

Define filters - Capture display

Watch Smart Statistics

Analyze Problems.

The Packet List Pane:

The Packet List Pane displays all the packets in the current capture file.

The Packet details Pane.

The Packet details Pane shows the current Packet.

Filtering Packets:

If you are trying to inspect something specific, such as traffic a program sends when phoning home, it helps to close down all other applications using the network so you can narrow down the traffic.

1. Create a filter to display only TCP/UDP Packet inspect the Packets and Provide the flow growth

Procedure:

- Select LA connection in Wireshark.
- Go to Capture Option
- Select Stop Capture automatically after 100 packets.
- Then click start capture
- Search TCP.. Packets in Search bar
- To see flow graph click statistic flow. Shows the timeline of Packet during transmission and its route.

Filter for only ARP Packets :-

- Go to capture option
- Select Stop capture automatically after 100 Packets.
- Then click start capture.
- Search ARP Packets in search box
- Save the Packets

Filter for HTTP :-

- Search HTTP in search box
- Save the Packets.

Same Procedure above for only IP / ICMP / DHCP Packets.
